

Overview:

Technical Equipment

An early overview, what equipment we will use in the following days can help us realizing a smart workflow – thank you for your collaboration.

I have got with me:

- Laptop (Win98 ... Win8 / Apple / Linux _____ ?)
- Tablet (Android / Apple _____ ?)
- Smart-/IPhone (Android / Apple _____ ?)

I have got the apps installed listed in the email I received in the days before.

We really need:

- Geocaching (Columbus)
- Filemanager
- Browser like Firefox
- VirtualRecorder including FreeMP3Droid

If you want to work with your computer, you should have audacity 2.0 installed including lame-encoder. You need a software to resize fotos, such as irfan-view. You should have a new browser installed like Firefox 21 including flash plugin. Your computer needs to connect to internet via ethernet or wifi (DHCP). Remember: We want your Smartphone to transfer files to our computers via USB – have you got the cable needed with you?

My Name:
